Excerpt: . . . sulfate monitors had significantly different conversion efficiencies at the various sites, although the gas analyzer efficiencies were consistently high. The most time-consuming activity for the sulfate monitor was data acquisition and data processing; running aqueous standards and dealing with the flash strip failures were the next most time-consuming activities. 3. 3 R and P 5400 CARBON MONITOR Of the EC, OC, and TC data from the R and P 5400, only the OC and TC data at the Seattle site met the predictability criteria while the TC data at the Indianapolis site almost met the predictability criteria. R and P 5400 EC, OC, and TC data did not meet the comparability criteria at any site. When compared with the STN carbon data, there was significant negative bias in the R and P 5400 TC, OC, and EC data at all five sites; regression slopes typically averaged 0. 4 to 0. 6. The most time-consuming activity for the 5400 carbon monitor was data acquisition and data processing; flow problems, along with oven and afterburner problems, were the most frequent and recurring operational issues. 3. 4 SUNSET CARBON MONITOR The results for the Sunset carbon monitor operated at three ( Phoenix, Chicago, and Seattle ) of the sites were significantly better. The EC data at Phoenix met the slope and intercept comparability criteria; the EC, OC, and TC data from all three sites either met or almost met the ratio-of-means and correlation comparability criteria; and EC, OC, and TC at...
