Reviews

A whole new eBook with a new point of view. It can be rally fascinating throgh studying period of time. I am delighted to explain how this is actually the finest book i have read through during my very own life and could be he best publication for at any time.

The author Wan-Jiung Hu(born1973) is a MD (National Taiwan University) and PhD (Johns Hopkins University). This book contains theories of everything in physics, chemistry, biology, geosciences, economics, and mathematics. Spinnity is a force to drag spacetime to rotate around central mass. Impellity is a force to drag spacetime to move along with the mass. Momentity is the combined term of spinnity and impellity. Rest mass produces gravity, moving mass produces momentity; rest charge produces electricity, moving charge produces magnetism. Lightity is dark energy. Photon emitted from galaxy expands the universe acceleratedly via radiation pressure. General relativity suggests mass induces spacetime curvature; charge relativity suggests charge induces spacetime torsion(vortex). There is no dark matter, and spiral galaxies (vortex-shaped) are formed due to charge relativity which replaces quantum electrodynamics. Integrating general relativity, charge relativity, and radiation tensor, we get Grand Unified Field Theory. We can also deduct the birth and end of universe. Integrating gravitospinnity and electromagnetism, we deduct a determinative atom model and chemical bond theory replacing quantum mechanics. In addition, I propose a new chemical bond theory according to the new atom model. Homochirality is due to co-catalysis of L-amino acids and D-sugars. Extinction is due to Milankovitch cycle. Earthquake is caused by radiation release from inner earth which explains Electromagnetismionosphere anomaly and intra-tectonic earthquakes replacing plate tectonic earthquake theory. Tornado genesis is related to charge relativity. In economics, I propose money conservation and monetary leverage to explain economic bubbles. In the part of theories of everything in mathematics, I propose a new Higgs mechanism to describe Higgs-meson interaction and Strong-light unification to solve the puzzle of Yang-Mills mass gap in QCD. I also explain the mechanism of turbulence by Navier-Stokes-Euler equation. This book is very important...
