RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 194 pages. Original publisher: College Station, Tex. : Texas A and M University ; Houston, Tex. : National Aeronautics and Space Administration, Lyndon B. Johnson Space Center ; Springfield, VA : National Technical Information Service, distributor, 1990 OCLC Number: (OCoLC)62467223 Excerpt: . . . 1-3 CHAPTER 1. OVERVIEW OF THE PROJECT In this report a systematic procedure is given for solving the QPP prob-lem when the induced norm is the Loo-norm. In particular, a Lute type system is considered with the input and output spheres measured with respect to the Loo-norm, and an algorithm is developed on the basis of mAnimizing the Hoo-norm of a linear closed-loop operator for solving the QPP problem. Relevant design criteria are derived by first embedding the problem in the L2 function space, leading to an Hoo-minimization problem which is followed by an exponential weighting technique for estimating the tracking error bounds in terms of Loo-norms. The approach to this prob-lem is based on fixed-point techniques, the multivariable circle criterion, and Hoo-optimal control. The controller gains satisfying the design criteria and the QPP are obtained by solving a Riccati equation and a Lyapunov equation. The controller synthesis methodology for servo-tracking in uncertain, nonlinear systems of the Lure type presented in the report is applied to a simple single input-single output, nonlinear, uncertain system and a two degree of freedom robotic manipulator. The manipulator tip is required to carry an unknown payload, lying between a given upper and a lower bound, along a semi-circular trajectory to a prespecified accuracy. The resulting controller resembles a robust computed torque arrangement with the feedback gains chosen specifically to provide the necessary reduction in sensitivity due to possible variations in the payload. Simulations results confirm the effectiveness of...
